

# SHAPE THINGS TO COME

Josh Wodak

**22 November – 8 December 2013**

Models of climate change trajectories show the shape of things to come for the biosphere and its inhabitants this century. Scientific organisations worldwide overwhelmingly maintain that the window to avoid runaway catastrophic climate change is closing fast: being one decade...at most. In turn, highly reputed climate scientists and scientific organisations are now proposing radical ways to engineer the world's climate through bio-engineering and geo-engineering.

*shape Things To come* explores this reversal of agency: from being shaped by things to come, to how humans may shape things to come through climate engineering interventions designed to separate existing life forms from six degrees of catastrophe.

**Please join us for the opening  
5.30 – 7.30pm, Friday 22  
November 2013**

Exhibition opened by Jeffrey McGee,  
Senior Lecturer, Newcastle Law School
